

Systems

ERIN KEITH

Goals

1. Review OOP and DBs
2. Introduce Model View Controller Design Pattern
3. Explore Object Relational Mapping

Example

in-class Movie Database

- What does it mean to be a movie?

General Data Model

OOP

State

- attributes

Behavior

- functions

Constraints

- types

RDBMS

State

- fields

Behavior

- query, insert, update

Constraints

- types, keys

Example

Example 2.21: Consider the two relations from our running movie database:

```
Movies(title, year, length, genre, studioName, producerC#)  
MovieExec(name, address, cert#, netWorth)
```

Model View Controller

Object-Relational Mapping

a piece of software designed to translate between the data representations used by databases and those used in object-oriented programming.

Example

- Choose a “tech stack” (language, framework, IDE, etc.)
 - Python Django in PyCharm
- Look for libraries that work with the DBMS
 - Django’s “database-abstraction API”
 - Utilizes an ORM

Framework ORM Example

- Find documentation and examples to determine
 - How to establish a connection
 - <https://docs.djangoproject.com/en/4.2/ref/databases/#postgresql-connection-settings>
 - How to submit queries
 - <https://docs.djangoproject.com/en/4.2/intro/tutorial02/#playing-with-the-api>
 - What's returned a the result of the queries
 - <https://docs.djangoproject.com/en/4.2/intro/tutorial02/#creating-models>
 - possible errors

<https://docs.djangoproject.com/en/4.2/intro/tutorial02/>

Django ORM Example

<https://docs.djangoproject.com/en/4.2/topics/db/queries/>

```
from django.db import models

class Producer(models.Model):
    name = models.TextField()
    city = models.CharField(max_length=100)
    state = models.CharField(max_length=2)

    def __str__(self):
        return self.name
```

Django ORM Example

<https://docs.djangoproject.com/en/4.2/topics/db/queries/>

```
from producer.models import Producer

p = Producer(name="Grand Hustle Records",
              city="Atlanta",
              state="GA")

p.save()
```

Django ORM Example

<https://docs.djangoproject.com/en/4.2/topics/db/queries/>

```
from producer.models import Producer
```

```
p = Producer.objects.get(city="Atlanta")
```
