

Erin Keith

Midterm Review

- In the WPEB 100
- Online
- Starts at 3pm
- Ends at 5pm (but it's unlikely you will need the full time)

Know the difference between the different categories of patterns (structural, creational, behavioral) and which pattern belongs to which category.

Explain the difference between coupling and cohesion.
Provide an example for each state:

- tightly coupled
- loosely coupled
- high cohesion
- low cohesion

- 
- Be able to compare and contrast (discuss similarities and differences) between any two patterns.
 - Be able to draw *generic* diagrams for any pattern

You will be given 3 design problems. Even though the problem description might be similar, each problem is independent; they *do not* depend on each other.

Be able to

- select the most appropriate design pattern to use for this problem and provide the pattern's intent
 - clearly describe how this pattern addresses the problem
- explain ***in complete sentences*** how this pattern should be implemented (no code)
- show an appropriate class diagram to illustrate the implementation of your pattern.
 - don't give a generic class diagram for this pattern but make it **specific** for that design problem.

- That's it!
